

Software Engineer

Job Description

SecureGive is a faith-based organization that serves churches and nonprofits. With a vision to see every ministry fully funded, we build and provide technology that empowers people to give. As a software developer joining our team, you will be a key contributor to building enterprise-level giving and donation management solutions. You will get the chance to work as part of a faith-focused and talented Agile team to create and maintain a broad suite of software applications, including Web, Mobile, Kiosk, and SMS.

What you will be doing:

- Developing services and components that are performant and robust using the latest technologies, MacBook Pro computers, and industry best practices.
- Creating Unit Tests to ensure code quality and performance.
- Creating documentation that conveys the function and design of your work.
- Developing in Scala, React, React Native, Electron and Swift on a Linux platform.
- Contribute to all aspects of the SDLC.

Must Have:

- Experience Building RESTful Web Services using SCALA, Java, C# or other OOP/Functional languages.
- Experience creating responsive web applications using React, Angular or VUE.
- Data Object-relational mapping experience using an ORM like Hibernate, Entity Framework, or Slick.
- A Bachelor's degree in computer science, computer engineering, or a related discipline and 3 years of experience or 5 years direct experience as a software developer.

Nice to Have:

- AWS experience
- Previous experience with Software as a Service applications.
- Mobile development using React Native, Swift, or Electron.
- Experience working in a fast-paced agile environment.
